

Larix laricina

Tamarack

Also called larch. A deciduous conifer, with a slender, pyramidal outline. Fine, needle-like leaves are light green in the spring, blue-green in summer, and golden-yellow in the fall. Especially beautiful in colonies. Fast-growing and short-lived. Tolerates many types of soil; often found in wet , swampy areas, but will also grow in drier situations.

Suggested companions: in wet areas, yellow birch (*Betula alleghaniensis*), black spruce (*Picea mariana*), winterberry (*Ilex verticillata*); in drier areas, quaking aspen (*Populus tremuloides*) and paper birch (*Betula papyrifera*).

Plant Type: Evergreen Tree

Size: 50-75' H
35-50' W

Water Tolerant: Somewhat

Habitat:

Forested Wetland
Shrubby Wetland
Wet Meadow

Soil: Average Garden Soil
Sandy/ Gravelly
Rich Moist
Very Damp/Wet
Clay

Exposure: sun

Flower Color:
Purple
Red

Bloom Time:
May

Plant in:

Groundcover: No

Other Attributes:
Fall color
